Investing in small-scale sustainable energy in commodity value chains

Prospects for Landlocked Countries
Commodity challenges of LLDCs

• Reliance on commodities for trade – a source of structural vulnerability

• access to energy - required to overcome structural vulnerabilities related to commodities. The lack of access to energy undermines efforts at commodity sector diversification

• the development of commodity sector is complementary to energy access as in many cases affordable energy can be generated efficiently as by product of the commodity supply chain operations.
Delicio fruits
Energy market for agri-commodities
Finding new efficiencies in commodity value chains
In conclusion

• Economic, social and environmental sustainability in commodity value chains requires co-development of energy and technology

• Complementary roles for public and private investment to achieve viable results

• Impact investment a new opportunity to achieve energy access goals in commodity value chains
